

Design an Expense Tracking App

Instructions

Design the user interface and functionality for an expense tracking app that includes the following features:

- The user needs to be able to enter and track their expenses by day, month and year.
- Tracking includes the ability to see totals and averages by day, month and year for each category of expense.
- Totals for day, month and year also needs to be shown for all categories combined.
- Each expense needs to be entered and details about each expense should be captured.
- Each expense should include:
 - Expense Date
 - Name of Expense
 - Category
 - Cost
 - Reason
 - Notes
- You need to have a way for the user to create a new entry, update an existing entry and delete an entry.
- The user should be able to select from already existing categories stored.
- There should also be a way to enter a new expense category.
- **Your app design needs to contain at least two different screens.** More screens will probably be needed to space out the features appropriately.
- **There is no need to save and retrieve data in this app version.** We will learn about data later in the class.
